## EXPERIENCE

**Veryable Inc** April 2022 - January 2026
***Frontend Engineer*** Dallas, TX

- Led development of Veryfication Program allowing businesses to achieve metrics-based verification status, increasing quality and quantity of Operator bids.
- Led planning and implementation of automated check-in/out (NOVA) with geofence drawing and Noahface integration, achieving 96% adoption and reducing manual pay adjustments by 67%.
- Built Bulk Post feature enabling businesses to post multiple Ops simultaneously, and Ops Coach to provide data-driven recommendations for improving worker retention.
- Designed Day View for centralized scheduling visibility, enabling managers to see all workers and make real-time adjustments to the work day.
- Built and scaled platform features serving 1000s of businesses and 1.5M+ workers, developing full-stack solutions across React, Next.js, Node.js, Express, and GraphQL.
- Led ShiftWorks product development for workforce management of full-time employees, securing first cohort of paid customers and validating product-market fit.
- Built internal Quick Post Op Tool allowing developers to create/bid/accept/complete ops with custom parameters, significantly reducing testing time.
- Implemented Cypress for end-to-end testing with test parallelization, reducing flaky tests and speeding up test execution by 80%.
- Expanded into backend development by contributing to banking infrastructure migration (Unit → Branch), launching 'Instant Pay' for instant worker payouts.
- Contributed to company-wide adoption of TanStack Query, react-hook-form, Nuqs, and Jotai, establishing patterns that improved state management reliability and DX.

**Café Sicilia / Panchos Mexican Buffet** August 2014 - December 2021
***Owner & Operator*** Dallas, TX

- Launched two new restaurant locations, achieving profitability 50% faster than previous openings through optimized operational planning and market positioning.
- Increased dine-in revenue by 15% through strategic menu redesign and targeted promotional campaigns.
- Pivoted business model during pandemic with family meal packages and date-night bundles, outperforming prior year sales despite industry-wide downturn.
- Oversaw operations across 9 units at peak, achieving sub-20% food cost and cost of goods sold.

## PROJECTS

**LookLab** | *React, TypeScript, Gemini API*

- Built an AI-powered wardrobe assistant that generates outfit ideas based on user preferences and weather conditions, with image-based outfit preview functionality.

**F-Stop** | *Next.js, TypeScript, React, Firebase, api-sports*

- Built a Formula 1 fan web app with real-time race data, driver/team stats comparison, and user accounts for saving favorites.

## EDUCATION
